# PRODUCT BULLETIN

**NEW!**

## While-In-Use Cover

Gibson Stainless has added the While-In-Use Cover to its product line.

While-in-use covers are designed to be used with Gibson single-gang device boxes in a vertical orientation to protect switches and receptacles against outdoor elements such as rain and snow or the spraying of water and use of cleaning chemicals often found in washdown environments.

Gibson's heavy-duty, deep design allows the cover to be fully closed while cords are plugged in and includes a notched closure tab to ensure the cover remains closed. A sloping design helps prevent the pooling of water and a padlock feature ensures electrical safety and security. The covers meet the latest NEC requirements for wet locations and extra duty applications.

The while-in-use cover is offered in Type 316 SS.

### Part Number
